

## About Me

I'm a student at the University of Douala, I'm 22. I'm a full-stack web developer, and I use ReactJS to build frontend applications and Nodejs to build backend applications. My main aim is to join a team which can help me to improve my web development skills.

## Skills

HTML

CSS

Javascript

Python

Typescript

Reactjs(Nextjs)

Nodejs(express)

Nestjs

Micorservices

Git/github/gitlab

MongoDB

Neo4j

Django(DRF)

Sql/Mysql

## Languages

French

English

## Educational

2018-2019

**Makepe High School**

It's where i got my bachelor's degree

2021 - present

**University of Douala in Cameroon**

I study computer science in the university of Douala since 2021 and i'm in level 3 now.

## Experiences

### Adaa Group

From 23 August to 23 November 2023 i worked as a Frontend Developer and Web Integrator at Adaa Group, developing websites using React , Nextjs and TypeScript, Tailwind CSS, integrating web pages with HTML, CSS and Javascript and also discussing how to organize backend code.

### Internship

In the months of June, July and August 2023, I did some academic internships at Ova-Consulting, where I learned enough to work in a team using tools like Slack and Trello.

## 2022

### Food Selling App

It's plate-form which can help to sell food (Pizza), users can add products to their card and order it.

link : <https://food-selling-app.vercel.app>

### Tetris Game

From August 2022 to Jan 2023 , with the help of many online tutorials and people, I was able to create a nice tetris game with Reactjs only.

link: <https://react-tetris-three.vercel.app/>

### Note-taking app

In the month of November 2022, i built an application that can help people store their notes, modify them, and delete them. They can also search them by tags. I used ReactJS and Typescript to build it.

Link over here: <https://note-taking-app-phi.vercel.app/>

### Chat application

During the last week of 2022, I start building an application with NodeJS and socket.io where someone can send messages and images to a group of person in a specific room in real time.

The link : <https://chat-app-cucz.onrender.com/>

## 2023

### Invoice Generator

From February 2023 to May 2023, I built an application to generate invoices and send them to someone by email. I use ReactJS, NodeJS (Express), and Nodemailer to do that.

Link to the project: <https://github.com/ivan01-tech/invoice-generator>

### Nested comments system

I also built a blog with a system of comments like Reddit where someone can add, update, and delete their comments, and also reply and like other comments in an infinite way. I did it by using ReactJS, Node (Express), Prisma, and Tailwind CSS.

The link is: <https://github.com/ivan01-tech/nested-comments-system>
